

These slides are made with Gar-dur® U.H.M.W.P.E. Polyethylene and have the best fit available anywhere. Our manufacturer is one of only two original equipment suppliers in the USA and Canada and the only one that also sells to the aftermarket. Rest assured we supply only the best, made in the USA and priced right too!

Slides with graphite available. Graphite lubricates the slide rail allowing for better performance and longer life. Graphite is especially important with today's high performance sleds. Don't be fooled by cheaper "graphite" slides that are actually only colored with lamp black or contain less graphite. Quality costs extra but yields better results. Don't settle for less.

Slides sold each.

NOTE: Colored and graphite slides available at the end of each manufacturer's section.

NOTE: No. S2829 for Phazer II: In 1990 Yamaha experimented with a 10mm thick hyfax instead of the stock 7mm thickness. The 10mm thickness takes the load off the riders and is therefore faster in good powder. However, if good snow is lacking, then the slide melts off fast due to the extra load on it until it gets down to the 7mm level where the load is shared by the idlers since they are designed in the suspension for the 7mm thickness. Due to complaints from customers of excessive wear with the thicker slides, Yamaha now recommends replacing only with the stock 7mm thickness.
